TENICOR

ARX2

OUTSIDE-THE-WAISTBAND HOLSTER

FEATURES

The ARX2 is a concealment belt holster. Hiding a gun outside the waistband comes down to how close the holster pulls the gun to the body, whether the belt attachment holds up over years of carry, and whether the holster can survive the fight. The ARX2 is built for all of it.

DURABLE DESIGN: Proprietary 1.5” belt loops are built to endure 700 pounds of pull force. Molded ridges in the shell strengthen the holster without adding bulk.

ZERO DEGREE CANT: The gun rides concealed in a neutral position supporting a fast draw.

RED DOT READY: Designed to accommodate most slide-mounted red dot sights. Fitment has been confirmed with common red dot sights appropriate for the gun's size.
