ARX LUX2

LIGHT-BEARING OUTSIDE-THE-WAISTBAND HOLSTER

FEATURES

The ARX LUX2 is a light-bearing outside-the-waistband holster designed for concealment on a variety of body types. This is achieved through angled wings and 1.5” belt loops, securing the gun tightly to the body. Proprietary retention adjustment hardware is built into the rear loop to fine-tune retention. These features provide a low profile, reliable solution to concealing a light-bearing gun while needing to focus on performance.

RETENTION ADJUSTMENT: Proprietary hardware built into the rear loop is used to adjust retention.

DURABLE DESIGN: Proprietary 1.5” belt loops are built to endure 700 pounds of pull force. Molded ridges in the shell strengthen the holster without adding bulk.

ZERO DEGREE CANT: The gun rides concealed in a neutral position supporting a fast draw.

CONTOURED DESIGN: Precisely angled wings and belt loops secure the gun tight to the body.

FULL GRIP ACCESS: The holster is profiled to allow a full firing grip.

RED DOT READY: Designed to accommodate most slide mounted red dot sights. Fitment has been confirmed with common red dot sights appropriate for the gun's size.
